                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                  The present invention describes human Apo-2. Apo-2 can be used
therapeutically to induce apoptosis in mammalian cells, and so is useful
to treat conditions associated with decreased apoptosis e.g. cancer.

Apo-2 is believed to be a new tumour necrosis factor (TNF) receptor
(TNFR). TNF cytckines can induce apoptosis, thought to be initiated by
binding to TNFRs, and Apo-2 triggered caspase-dependent apoptosis. It
can be used to identify agents activating Apo-2, useful to treat
therapeutically (e.g. those containing immunoglobulin sequences can be
inhibit apoptosis) or diagnostically (e.g. those comprising an epitope
antibodies). It can be used to produce antibodies which can be combined
with a (particularly pharmaceutically acceptable) carrier in compositions
or used to produce dimeric molecules (especially homodimeric molecules
comprising first and second Apo-2 antibodies used to block
single-chain) antibodies can be administered to induce apoptosis in
mammalian cancer cells, and antagonistic antibodies used to block
excessive apoptosis (e.g. in neurodegenerative diseases). Apo-2
expression in cells/tissues and in Apo-2 purification. The present
sequence represents a single chain Apo-2 antibody, designated 24C4.

The present sequence is an agonist antibody clone to the human WSX receptor, which can be used to identify and purify ligands and activators. An anti-WSX receptor antibody can be used as an agonist to activate the WSX receptor in an also differentiation of a cell expressing the WSX receptor. It can also be used to decrease body weight and/or fat-depot weight and/or food intake in an obese mammal. WSX receptor ligands can be used to enhance proliferation or differentiation of lymphoid, myeloid or erythroid blood cell lineages. This is useful when a mammal, especially a human, is suffering from decreased blood cell levels, i.e. anaemia, caused by chemotherapy, radiation therapy or bone marrow transplantation therapy. It can also be used to repopulate blood cells in a mammal. The products can also be used to treat, e.g. neoplastic disorders, arteriosclerosis, Type II diabetes, costeoarthritis, dermatological disorders, hypertension, insulin cresistance, hypercholesterolaemia, hypertriglyceridaemia, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          aqkfqgrvtmtrdtsigtaymelsrlssddtavyycardryygssayhrgsyymdvwgrg

AAB67617-23 represent single chain antibody (scFv) fragments which are specific for human leukocyte antigen (HLA)-Cw6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       or functional immunoglobulin e antigen Cw6, useful for treatment

```
AAB67617-23 represent single chain antibody (scFv) fragments which are specific for human leukocyte antigen (HLA)-Cw6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated human immunoglobulin or functional immunoglobulin fragment specific for human leukocyte antigen Cw6, useful for treatment of humans and for human leukocyte antigen phenotyping -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AQKFQGRVTITADESTSTAYMELSSLRSEDTAVYYCARDRVVVPATSLRGGMDVWGQGTT 120

;; virucidal; antibacterial; TF antigen;
                                                                                           The present sequence is that of human single chain antibody (scFv)

HID-1, which is directed against platelet glycoprotein ID (GPID).

HID-1 is composed of a heavy chain variable region (see AAY95189)

and light chain variable region (see AAY95194)

clinker. The HID series of scFv was isolated from a human synthetic vH and VL scFv library by 3 rounds of phagemid selection against transfected CHO cells expressing the GPID alpha component of the GPID/IX/V complex on their surface, followed by a 4th round of selection against washed human platelets, and 2 final rounds in which attempts were made to displace scFv from washed platelets by flooding with murine monoclonal antibody or mimotope peptide (see AAY95229). Whether displayed as surface proteins on a phagemid or secreted as free scFv by Escherichia coli, the HID scFv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scFv are composed of native human protein sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AQKFQGRVTMTRDTSIGTAYMELSRLSSDDTAVYYCARDRYYGSSAYHRGSYYMDVWGRG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EVQLVQSGAEVKKPGASVKVSCKASGYTFTGYYMYWVRQAPGQGLEWMGWINPNSGGTNY 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombi in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet GPIb alpha and of selecting a VH or VL region of an antibody that inhibits platelet aggregation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ---mphawgqg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TLVTVSSGGGGTGGGGGGGGG-SSELTQDPAVSVALGQTVRITCQGDSLRSYYASWYQQK

This invention describes a novel vaccine (VI) against

conformation-dependent antigens (CDA) comprising DNA (I) and/or an
autibody, or peptide which immunologically imitates CDA, is new. (I)
cencodes a region of an antidiotypic antibody (Ab2) or another peptide
which: (a) specifically binds to the binding site of an antibody (Ab1)
cencodes a region of an antidiotypic antibody (Ab2) or another peptide
which: (a) specifically binds to the binding site of an antibody (Ab1)
cor an antigen binding molecule; and (b) immunologically mimics the
initial antigen. The epitope is partially or completely
conformation-dependent, and has an immunogenic structure defined by a
specific spatial conformation of amino acids. (I) is used in the form
of linear or circular naked DNA and/or with a viral vector and/or
adjuvants. The products of the invention have cytostatic, virucidal,
adjuvants. The products of the invention have cytostatic, virucidal,
antibocterial and antiparasitic. The invention also describes (I) a
corresponding vaccine (V2) against antigens which are not proteins or
peptides, as defined above but which have epitopes which show an
immunogenic structure; (2) preparing (V1) and (V2); (3) human
corresponding vaccine (V2) against the MUCl-conformation epitope
having one of 31 approximately 60 residue amino acids sequences, all fully in the
specification; (5) antidotypic antibody fragments against the TF
chaving one of 16 9-17 residue amino acid sequences, all fully in the
specification; (5) antidotypic antibody fragmentes against the TF
antigen having one of 24 approximately 200 residue amino acid sequences,
fully defined in the specification; (6) TF carbohydrate epitope mimetics
thaving one of 25 7-13 residue amino acid sequences, all fully defined
the specification; and (17) DNA sequences encoding the fragments and
cancer, and infectious diseases, e.g. caused by prions, viruses, bacteria
and parasites. The procious diseases, e.g. caused by prions, viruses defined the procious viruses, backer of the procious diseases

                                                                                                                                                                                                                                                     The present sequence is that of human single chain antibody (scFv) HID-3, which is directed against platelet glycoprotein Ib (GPIb).

HID-3 which is directed against platelet glycoprotein Ib (GPIb).

HID-3 is composed of a heavy chain variable region (see AAY95210)

and light chain variable region (see AAY95215) joined via a peptide
linker. The HID series of scFv was isolated from a human synthetic
VH and VL scFv library by 3 rounds of phagemid selection against
transfected CHO cells expressing the GPIb alpha component of the
GPIb/IX/v complex on their surface, followed by a 4th round of
selection against washed human platelets, and 2 final rounds in
Which attempts were made to displace scFv from washed platelets by
flooding with murine monoclonal antibody or mimotope peptide (see
AAV95229). Whether displayed as surface proteins on a phagemid or
secreted as free scFv by Escherichia coli, the HID scFv clones are
capable of inhibiting von Willebrand factor-dependent aggregation of
platelets. The scFv are composed of native human protein sequences
and are therefore attractive potential reagents for therapeutic
purposes. They provide a new class of antithrombotic agents,
useful for the prevention of platelet-dependent thrombi in
diseased arteries, bypass grafts, dialysis etc., and can also be
used as diagnostic reagents. Methods of inhibiting aggregation
of platelets, of binding human platelet GPIb alpha and of selecting
a VH or VL region of an antibody that inhibits platelet aggregation
                                                                                                                                                                                       Isolated nucleic acid molecule encoding anti-human platelet glycoprotein Ib alpha molecule useful for producing antibodies which inhibit platelet aggregation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14; Gaps

conformation-dependent antigens (CDA) comprising DNA (1) and/or an antibody, or peptide which immunologically imitates CDA, is new. (T) encodes a region of an antidiotypic antibody (Ab2) or another peptide which immunologically imitates CDA, is new. (T) encodes a region of an antidiotypic antibody (Ab2) or another peptide which: (a) specifically binds to the binding site of an antibody (Ab1) or an antigen binding molecule; and (b) immunologically mimics the initial antigen. The epitope is partially or completely conformation-dependent, and has an immunogenic structure defined by a specific spatial conformation of amino acids. (I) is used in the form of linear or circular naked DNA and/or with a viral vector and/or adjuvants. The products of the invention have cytostatic, virucidal, antibacterial and antiparasitic. The invention also describes (1) a corresponding vaccine (V2) against antigens which are not proteins or peptides, as defined above but which have epitopes which show an immunogenic structure; (2) preparing (V1) and (V2); (3) human antidiotypic antibody fragments against the MCC1-conformation epitope mimics having one of 31 approximately 60 residue amino acids sequences, all fully defined in the specification; (6) residue amino acid sequences, antigen having one of 24 approximately 200 residue amino acid sequences, the specification; (6) artidiotypic antibody fragments against the TF candon or the specification; (6) TF carbohydrate epitope mimetic candigor and or 25 7-13 residue amino acid sequences, all fully defined in the specification; (6) TF carbohydrate epitope mimetic cancer, and infectious diseases, e.g. caused by prions, viruses, bacteria and parasites. The vaccines are effective in cases where vaccination has

The invention relates to antibodies specific to pectin, such as PAMI and PAM2 scFv (single chain variable region). These antibodies are derived from a naive phage display library known as the synthetic scFv Library (#1). PAMI and PAM2 antibodies are capable of binding to de-esterified and un-substituted homogalacturonan (HG), useful for identifying a pectin motif. PAM antibody is useful for identifying a pectin motif or can be used to prepare a food for human and animal consumption, such as jams, yogurts or gels. The PAM antibodies are further useful for quantifying the amount of pectin in a sample or for extracting pectin from a sample. PAM antibodies are also used to identify de-esterified homogalacturonan blocks in the primary cell walls of plants. The present sequence is PAM1 scFv antibody specific to pectin.

Note: This sequence is stated as being the same as that shown as sequence has 2 extra residues at the C-terminal end.
                                                                                                                                                                                                                                                                                     fying a pectin molety, for a sample or for extracting pectin
                                                                                                                                                                                                                                                                     of binding de-esterified

This sequence represents a single chain antibody (ScFv4) constructed from the sequence encoding a human antibody raised against the porcine enzyme alpha-1,3-galactosyl transferase (alpha-1,3-GT). The enzyme catalyses the attachment of a galactose sugar molecule on the N-acetyllactosamine molety found on surface glycoproteins and glycolipids. These sugar molecules are partly responsible for raising anti-graft antibodies, which lead to graft tissue rejection. The invention relates to a method of inhibiting the graft rejection mechanism by introducing the sequence encoding an antibody targeted to alpha-1,3-GT into the cells of animal, especially a pig, from whom organs may be used for xenotransplants. Neutralisation of the alpha-1,3-GT leads to tissues or organs lacking the galactose on the glycoproteins and glycolipids, thus preventing induction of the rejection response.
                                                                             galactose;
                                                                        Isoform; porcine; enzyme; alpha-1,3-galactosyl transferase; galactose sugar; N-acetyllactosamine; glycoprotein; glycolipid; antibody; pig; graft tissue rejection; organ transplantation; xenotransplant; human; single chain antibody.

Apo-2 can be used therapeutically to induce apoptosis in mammalian cells, and so is useful to treat conditions associated with decreased apoptosis e.g. cancer. Apo-2 is believed to be a new tumour necrosis factor (TNF) receptor (TNFR). TNF cytokines can induce apoptosis, thought to be initiated by

binding to TNFRs, and Apo-2 triggered caspase-dependent apoptosis. It can be used to identify agents activating Apo-2, useful to treat therapeutically (e.g. those containing immunoglobulin sequences can be inhibit apoptosis) or diagnostically (e.g. those comprising an epitope activation allow Apo-2 detection and purification using anti-tag polypeptide allow Apo-2 detection and purification using anti-tag antibodies). It can be used to produce antibodies which can be combined with a (particularly pharmaceutically acceptable) carrier in compositions or used to produce dimeric molecules (especially homodimeric molecules comprising first and second Apo-2 antibodies). Agonistic (especially mammalian cancer cells, and antagonistic antibodies used to block antibodies may also be used diagnostically e.g. to detect Apo-2 expression in cells/tissues and in Apo-2 purification. The present sequence represents a single chain Apo-2 antibody, designated 20E6.

The present invention describes human Apo-2. Apo-2 can be used therapeutically to induce apoptosis in mammalian cells, and so is useful to treat conditions associated with decreased apoptosis e.g. cancer.

Apo-2 is believed to be a new tumour necrosis factor (TNF) receptor (TNF). The cytokines can induce apoptosis, thought to be initiated by binding to TNFRs, and Apo-2 triggered caspase-dependent apoptosis. It can be used to identify agents activating Apo-2, useful to treat mammalian cancer cells, and to produce Apo-2 chimeras useful therapeutically (e.g. those containing immunoglobulin sequences can be therapeutically (e.g. those containing immunoglobulin sequences can be complicated allow Apo-2 detection and purification using anti-tag antibodies). It can be used to produce antibodies which can be combined with a (particularly pharmaceutically acceptable) carrier in compositions or used to produce dimeric molecules (especially homodimeric molecules comprising first and second Apo-2 antibodies which capptosis in mammalian cancer cells, and antagonistic antibodies used to block excessive apoptosis (e.g. in neurodegenerative diseases). Apo-2 antibodies may also be used diagnostically e.g. to detect Apo-2 extression in cells/tissues and in Apo-2 purification. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cancer;

This is a membrane-associated protein which binds to CTLA-4. Chimeric constructs comprising DNA sequences encoding the extracellular domain of murine CTLA4 and human CD8 were used for the study of anti-CTLA4-sFv protein. The anti-hCTLA4 sFv functions as a ligand binding to CTLA-4 on activated T-cells and antagonises the co-stimulatory signal provided by the interaction between donor B7 and recipient CD28. Cells expressing the anti-hCTLA4 sFv failed to stimulate T-cell proliferation. This is used in

This sequence represents a single chain antibody (ScFv5) constructed from the sequence encoding a human antibody raised against the porcine enzyme alpha-1,3-galactosyl transferase (alpha-1,3-GT). The enzyme catalyses the attachment of a galactose sugar molecule on the N-acetyllactosamine molety found on surface glycoproteins and glycolipids. These sugar molecules are partly responsible for raising anti-graft antibodies, which lead to graft tissue rejection. The invention relates to a method of inhibiting the graft rejection mechanism by introducing the sequence encoding an antibody targeted to alpha-1,3-GT into the cells of animal, especially a pig, from whom organs may be used for xenotransplants. Neutralisation of the alpha-1,3-GT leads to tissues or organs lacking the galactose on the glycoproteins and glycolipids, thus preventing induction of the rejection response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ή

This sequence represents a single chain antibody (ScFv2) constructed from the sequence encoding a human antibody raised against the porcine enzyme the sequence encoding a human antibody raised against the porcine enzyme alpha-1,3-galactosyl transferase (alpha-1,3-GT). The enzyme catalyses the attachment of a galactose sugar molecule on the N-acetyllactosamine molecules are partly responsible for raising anti-graft antibodies, which lead to graft tissue rejection. The invention relates to a method of inhibiting the graft rejection mechanism by introducing the sequence encoding an antibody targeted to alpha-1,3-GT into the cells of animal, especially a plg, from whom organs may be used for xenotransplants. Neutralisation of the alpha-1,3-GT leads to tissues or organs lacking the galactose on the glycoproteins and glycolipids, thus preventing induction of the rejection response.

This sequence represents a single chain antibody (ScFv3) constructed from the sequence encoding a human antibody raised against the porcine enzyme alpha-1,3-galactosyl transferase (alpha-1,3-GT). The enzyme catalyses the attachment of a galactose sugar molecule on the N-acetyllactosamine molecules are partly responsible for raising anti-graft antibodies, which lead to graft tissue rejection. The invention relates to a method of inhibiting the graft rejection mechanism by introducing the sequence encoding an antibody targeted to alpha-1,3-GT into the cells of animal, especially a pig, from whom organs may be used for xenotransplants. Neutralisation of the alpha-1,3-GT leads to tissues or organs lacking the galactose on the glycoproteins and glycolipids, thus preventing induction of the rejection response.
                                                                                      galactose;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                     receptor, which can be used to identify and purify ligands and activators. An anti-WSX receptor antibody can be used as an agonist to activate the WSX receptor antibody can be used as an agonist of a cell expressing the WSX receptor. It can also differentiation of a cell expressing the WSX receptor. It can also be used to decrease body weight and/or fat-depot weight and/or food intake in an obese mammal. WSX receptor ligands can be used to enhance proliferation or differentiation of lymphoid, myeloid or erythroid blood cell lineages. This is useful when a mammal, cspecially a human, is suffering from decreased blood cell levels, i.e. anaemia, caused by chemotherapy, radiation therapy or bone marrow transplantation therapy. It can also be used to reappulate blood cells in a mammal. The products can also be used to treat, e.g. neoplastic disorders, arteriosclerosis, Type II diabetes, polycystic ovarian disease, cardiovascular diseases, osteoarthritis, dermatological disorders, hypertension, insulin resistance, hypercholesterolaemia, hypertriglyceridaemia, cancer and cholelithiasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

```
This sequence represents a single chain antibody (ScFv1) constructed from the sequence encoding a human antibody raised against the porcine enzyme talpha-1,3-galactosyl transferase (alpha-1,3-GT). The enzyme catalyses the attachment of a galactose sugar molecule on the N-acetyllactosamine molety found on surface glycoproteins and glycolipids. These sugar molecules are partly responsible for raising anti-graft antibodies, which lead to graft tissue rejection. The invention relates to a method of inhibiting the graft rejection mechanism by introducing the sequence encoding an antibody targeted to alpha-1,3-GT into the cells of animal, especially a pig, from whom organs may be used for xenotransplants.

Neutralisation of the alpha-1,3-GT leads to tissues or organs lacking the galactose on the glycoproteins and glycolipids, thus preventing induction of the rejection response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

FINUSOL 19 heavy chain v region (G6+ T-L42) - human (fragment)
C; Species: Homo sapiens (man)
C; Species: Homo sapiens (man)
C; Date: 17-Apr-1993 #sequence_revision 17-Apr-1993 #text_change 16-Aug-1996
C; Accession: PH0962
R; Martin, T; Duffy, S.F.; Carson, D.A.; Kipps, T.J.
J. Exp. Med. 175, 983-991, 1992
A; Title: Evidence for somatic selection of natural autoantibodies.
A; Reference number: PH0952; MUID:92202880
A; Reference number: PH0952; MUID:92202880
A; Ratus: nucleic acid sequence not shown
A; Molecule type: DNA
A; Residues: 1-120 < MAR>
C; Superfamily: immunoglobulin v region; immunoglobulin
B; 1-30/Region: immunoglobulin homology < C; Keywords: heterotetramer; immunoglobulin
F; 15-98/Domain: immunoglobulin homology < CiMM>
F; 15-98/Domain: immunoglobulin homology < CiMM>
F; 31-35/Region: complementarity-determining 1
F; 36-50/Region: complementarity-determining 3
F; 99-108/Region: complementarity-determining 3
F; 99-108/Region: complementarity-determining 3
